Task 6:

This screenshot shows the VS Code interface for a Django project named 'new_libraryproject'. The Explorer sidebar on the left displays the project structure, including 'apps', 'migrations', and 'static' directories. The main editor window shows the 'urls.py' file in the 'new_libraryproject' app. The code defines a 'urlpatterns' list with three entries: a home page, an admin site, and a path for 'books' that includes 'apps.bookmodule.urls'. The bottom panel shows the terminal output of the Django development server.

```
new_libraryproject > urls.py
18 from django.contrib import admin
19 from django.urls import include, path
20 from django.http import HttpResponse
21
22 def home(request):
23     return HttpResponse("hello, world!")
24
25 urlpatterns = [
26     path("", home, name="home"),
27     path("admin/", admin.site.urls),
28     path("books/", include("apps.bookmodule.urls")),
29     path("users/", include("apps.usermodule.urls")),
30 ]
```
